CLIMATE CHANGE ADAPTATION IN A TRANSBOUNDARY BASIN IN CENTRAL ASIA
an interactive talk with Dominic Stucker

Dominic’s talk will focus on cooperative adaptation strategies at the community, water user association, district, and national levels along the Khojabakirgansai, a small transboundary tributary of the Syr Darya in Kyrgyzstan and Tajikistan. Based on his presentation, Dominic is interested to hear what Tufts students would offer as policy and practice recommendations.

Dominic Stucker is Co-Founder and Programs Manager at Sustainability Leaders Network and an independent researcher in climate change, natural resources, and livelihoods, especially in Central Asia. He holds degrees from Stanford University, Brown University, and the UN-mandated University for Peace.

Friday, November 8
3:00 - 4:00 pm
Tufts Department of Urban & Environmental Policy & Planning
97 Talbot Ave, Medford, MA
